

ECOSTART TREE SHELTER

Rural Tree Planting

A twin-walled shelter made from 50% recycled content to protect slender plants from small browsing animals in small scale landscaping projects.

These shelters enhance plant growth during establishment by improving the micro-climate conditions; providing reliable protection and safeguarding trees and plants from wildlife and spray damage.

Ecostart is often used in hedging, tree planting and small scale landscape projects - most suited for whip planting in the 20cm - 40cm range. These shelters will protect plants, whips, hedges and trees from rabbits, voles and hares in particular.

Benefits

- UV stabilised to provide a minimum of 5 years protection - dependent on conditions
- Flared rim which minimises stem abrasion
- Twin-walled cylindrical construction for best strength to weight ratio
- Nested for ease of transportation and storage
- Pre-fitted ties for quick installation
- Environmentally harmless polypropylene
- Strengthening rods at stake area to prevent shelter tear
- Laserline designed to split to avoid plant strangulation

Specification

Material	Polypropylene tube and nylon tie
Height	0.6m, 0.75m
Diameter	57mm - 73mm
Nest	3
Bundle	150
Ties	1 x 8" - 0.6m 2 x 8" - 0.75m
Colour	Green
Service Life	5 Years (minimum)
Degradability	Photodegradable
