

GALVANISED WIRE NETTING

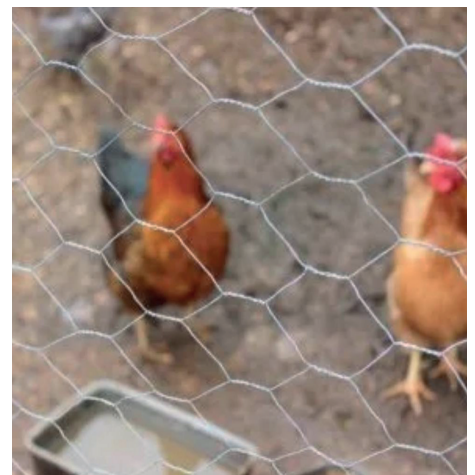

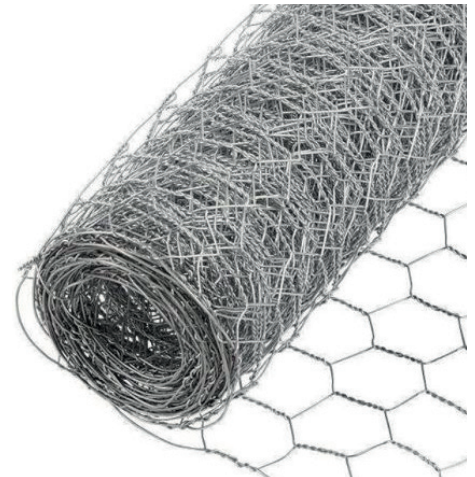

Rural Tree Planting

Dipped in protective zinc coating (galvanised) to prevent rusting and then woven into a hexagonal netting.

It can be used for industrial, construction, agricultural, breeding and DIY sectors. The torsion of the wires and the hexagonal mesh together with the excellent quality standards and increased thickness of the galvanising coating process, gives the wire netting fencing exceptional durability and malleability. This makes it unbeatable when used for special products such as protective barriers for ornamental flowering plants and fencing for small pets such as rabbits and birds.

Specification

Height	Hole Size	Gauge	Length	Qty per Pallet
600cm (24")	13mm	22g (0.7mm)	10m	100
600cm (24")	13mm	22g (0.7mm)	50m	70
600cm (24")	25mm	20g (0.9mm)	10m	100
