

STANDARD TREE SHELTER

The Standard Tree Shelter provides an improved micro-climate for trees when tree planting, which results in better initial established and higher survival rates.

This phenomenon allows for the planting of smaller trees, which are cost effective, easier to source and ultimately produce trees with stronger roots.

They are ideal to protect growing trees from damage against wildlife - they offer a great solution to allow for herbicide weed killer to be sprayed around the base of the tree while preventing the spray contacting the newly established sapling.

Benefits

- UV stabilised to provide a minimum of 5 years protection - dependent on conditions
- Flared rim which minimises stem abrasion
- Nested for ease of transportation and storage
- Twin-walled construction for best strength to weight ratio
- Pre-fitted re-releaseable ties for quick installation and maintenance
- Environmentally harmless polypropylene
- Strengthening rods at stake area to prevent tearing of the shelter
- Laserline designed to split to avoid tree strangulation as it grows

Specification

Material	Polypropylene tube
Height	0.6m, 0.75m, 1.2m
Diameter	73mm - 105mm
Nest	5
Bundle	100
Ties	1 x 9" - 0.6 2 x 9" - 0.75 2 x 9" - 1.2
Colour	Green
Service Life	5 Years (minimum)
