

SUPPORT FRAME ASSEMBLY TYPE 2

Urban Tree Planting
& Tree Irrigation

Used to stabilise tree grilles and helps to prevent shrinkage and subsidence of the tree pit.

Support Frames come with security clamps to secure the individual sections of the tree grille to each other and to the support frame, which increases rigidity of the whole unit and prevents removal of the grille sections.

Support Frame Shapes Available

Square and Circle

Type 2 Assembly

- 1) Bolt the inner sections into the outer halves; it is essential that the inner sections are toe down to ensure the grille fits flush.
- 2) Bolt the two completed halves together around the tree.
- 3) Set the frame into ground on ragged legs, ensuring the frame is completely level.
- 4) Place tree grille into frame.
- 5) Apply security straps if applicable.
